

# Important Notice: Airline Safety

July 17, 2022

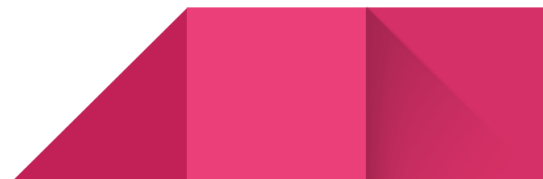

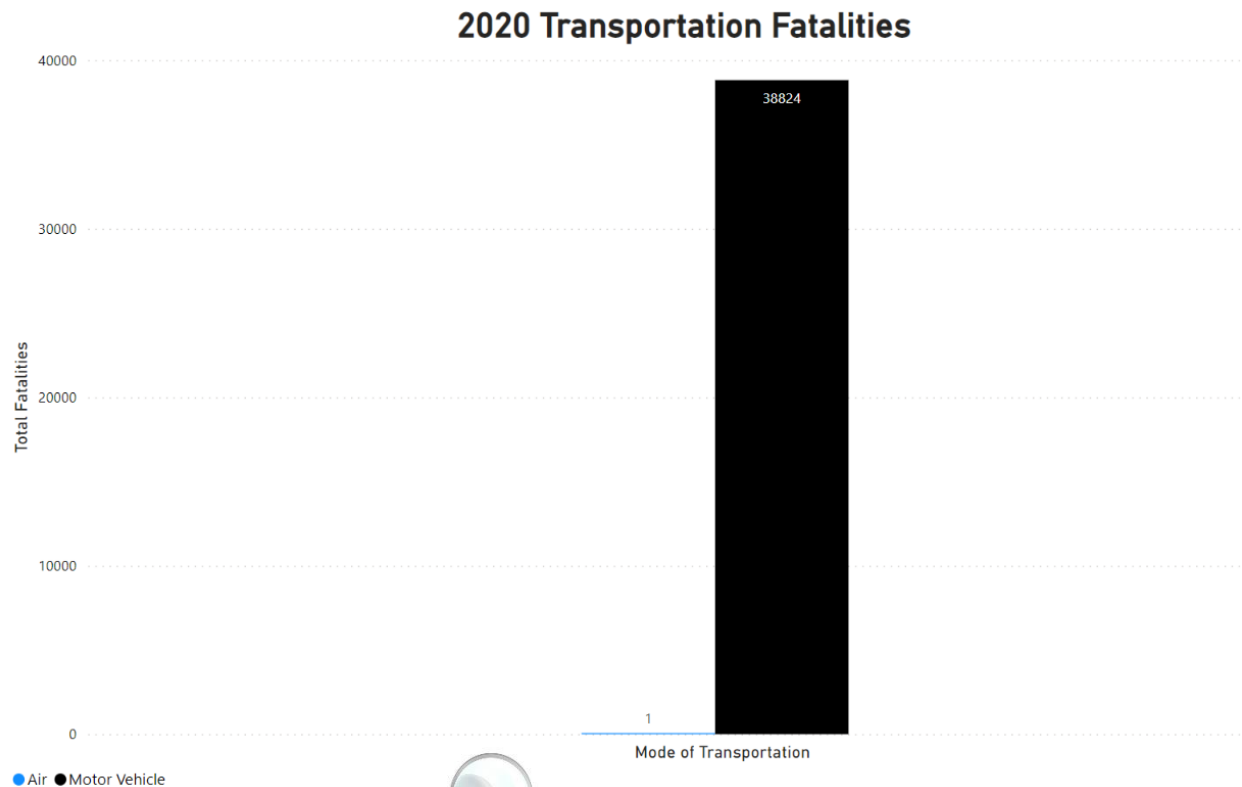

---

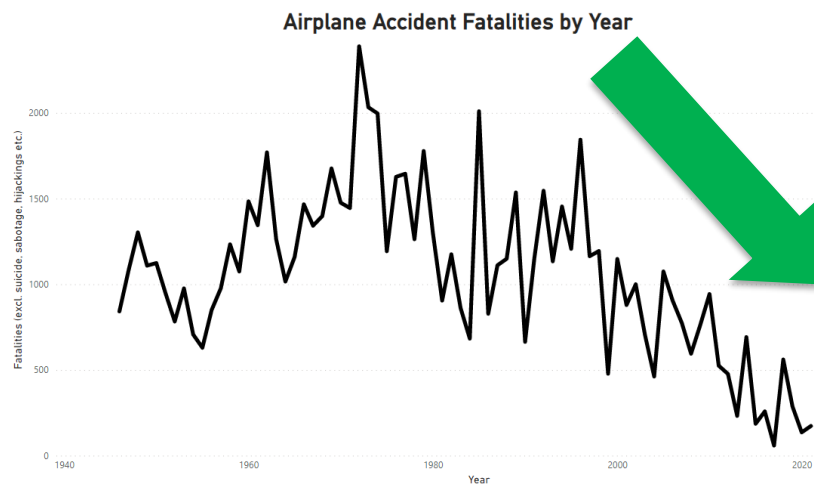

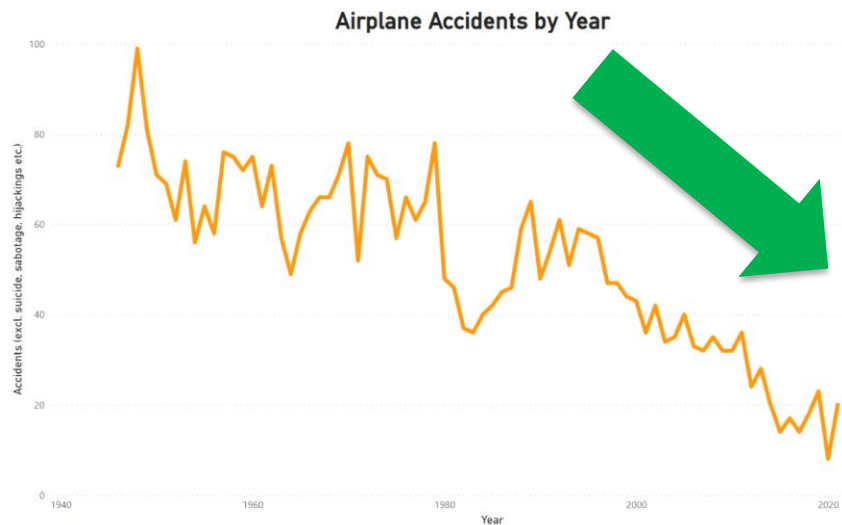

# Air Travel is Still Safe

Recently, the media caused a stir claiming air travel is no longer safe. Today, our airline wants to set the record straight by providing you with the truth through data!

Did you know that in 2020 automobiles far outpaced airplanes in transportation fatalities 38,824 to 1?

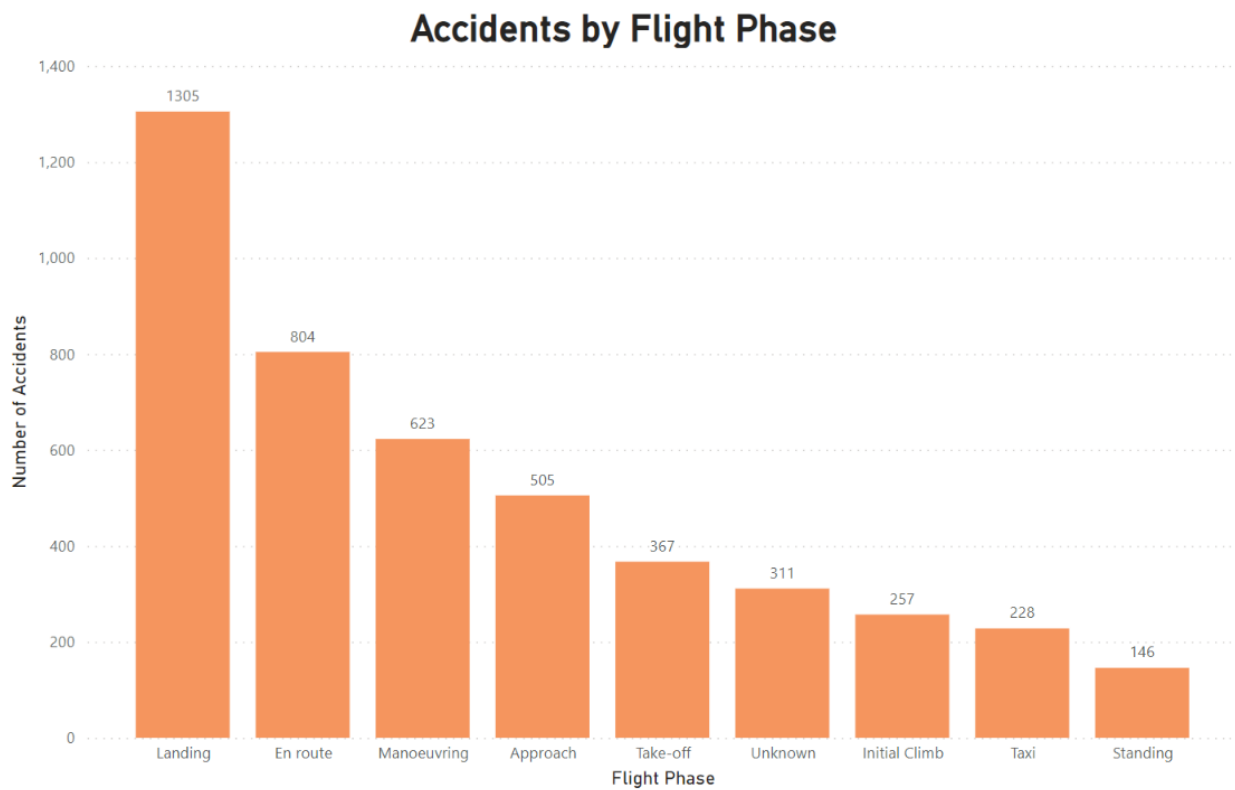

Additionally, since the 1940's airplane accidents and accident fatalities show an overall downward trend. As you can see, there has not been a safer time to fly in recent history!

# Wolf Airlines Prioritizes Your Safety

## Whether Leaving or Arriving

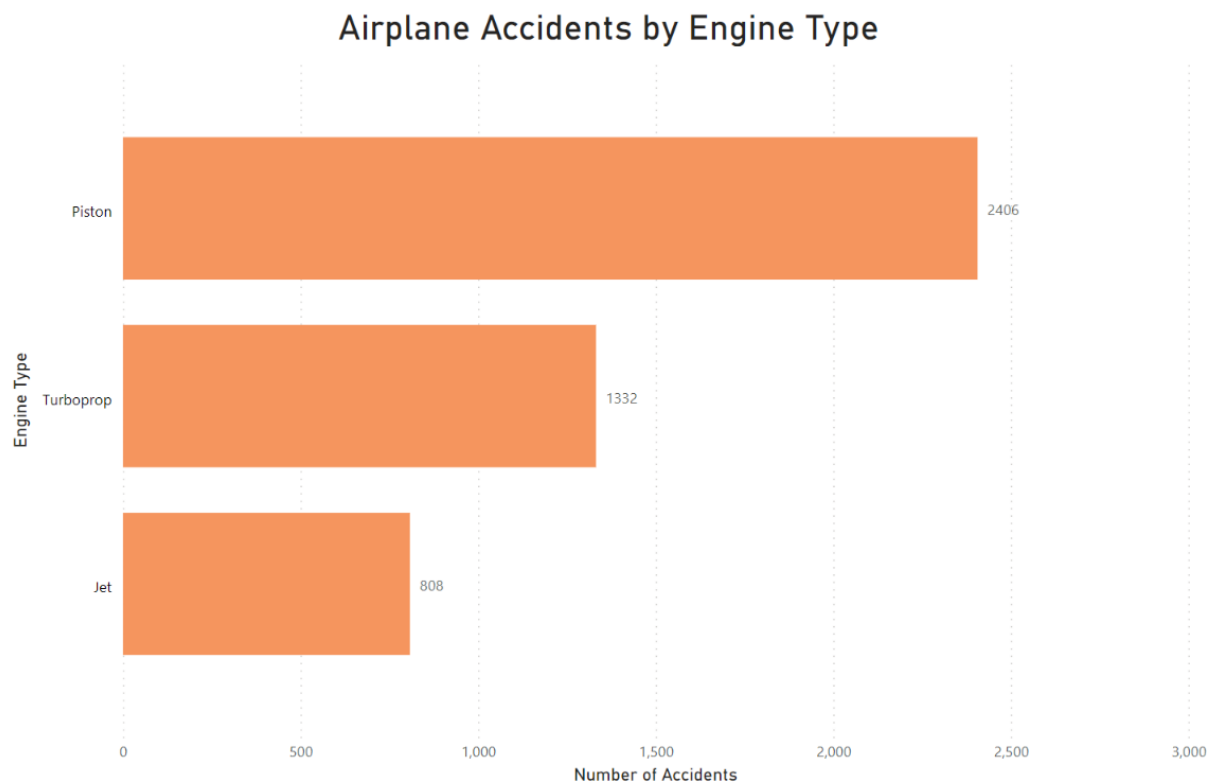

Wolf Airlines reviewed the data on the most dangerous flight phases and tailored our staff training and safety measures accordingly. Regardless of whether you are embarking on your adventure or returning home after an exciting trip, rest assured that Wolf Airlines is taking extensive safety measures throughout all flight phases especially the landing!

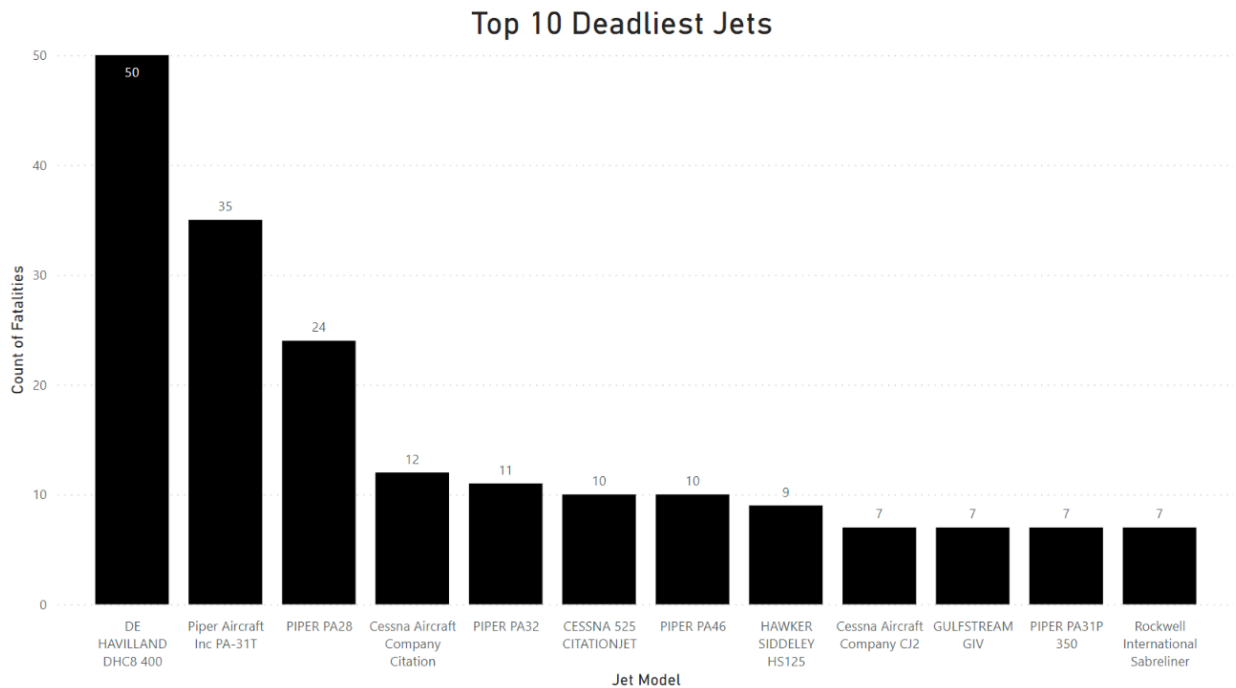

---

## Travel in the Safest Aircraft

Here at Wolf Airlines we are different from the other airlines because our team exclusively flies jet engine planes. We elected to fly only jet planes because this aircraft engine type is associated with the lowest number of accidents.

Our jet-engine exclusive fleet does not include the deadliest jets because our team of experts carefully evaluates safety ratings and data before purchasing a new jet to carry you, our valued customers.

Now that you have the data, we hope that you will choose Wolf Airlines for your next getaway! Book your flight today at [www.wolfairlines.com](http://www.wolfairlines.com). Safe travels!
